

Date	04 July 2026
Team ID	To Be Assigned
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

S.No	Item to Submit	Submitted
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt dependency file	Yes
4	Dataset(Crop_recommendation.csv)	N/A
5	Environment configuration example	Yes
6	Deployed application URL	No
7	Executable binary / APK	N/A
8	Dockerfile / Containerization configuration	No
9	Test files and test results	Yes
10	Demo video or walkthrough	No

Step 2: File / Folder Structure

OptiCrop-Main/

- app.py
- train_model.py
- requirements.txt
- model.pkl
- label_encoders.pkl
- scaler.pkl
- Procfile
- README.md
- dataset/Crop_recommendation.csv
- templates/about.html
- templates/index.html
- templates/findyourcrop.html
- templates/result.html
- static/css/style.css
- static/images/

Field	Details
Hosted / Deployed URL	Not deployed yet
Login Credentials	Not applicable
Platform / Hosting Provider	Local Flask Application
Repository Link	Repository to be added
Demo Video Link	To be uploaded

Step 4: Run Instructions

1. Install Python 3.11.
2. Run: pip install -r requirements.txt
3. Place Crop_recommendation.csv dataset in the dataset folder.
4. Run train_model.py to generate model files.
5. Start application using: python app.py
6. Open browser and visit http://127.0.0.1:5000

Known Issue / Limitation	Workaround / Status
No cloud deployment available	Can be executed locally using Flask.
Requires Python environment setup	Install dependencies using requirements.txt.
Predictions depend on dataset quality	Use a clean and updated crop dataset for better accuracy.
