

Demonstration of Proposed Features

Date	04 July 2026
Team ID	To Be Assigned
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	1 Mark

This document lists the proposed features for the OptiCrop project and tracks whether each feature was implemented and demonstrated during project execution.

S. No	Feature Name	Description	Status	Demonstrated	Remarks
1	Soil & Weather Data Entry	Accepts Nitrogen, Phosphorous, Potassium, temperature, humidity, pH, and rainfall inputs.	Implemented	Yes	Successfully demonstrated.
2	Input Validation	Validates user input before processing.	Implemented	Yes	Invalid inputs handled correctly.
3	Data Preprocessing	Processes and scales input data before prediction.	Implemented	Yes	Integrated with prediction model.
4	Crop Recommendation	Predicts the most suitable crop using the trained ML model.	Implemented	Yes	Core functionality demonstrated.
5	Results Display	Displays the recommended crop on the result page.	Implemented	Yes	Results displayed successfully.
6	Flask Web Interface	Provides a user-friendly interface for crop prediction.	Implemented	Yes	Fully functional interface.

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
